

XC6204/6205 Series

High Speed LDO Regulators Output ON-OFF Control

- ◆ CMOS Low Power Consumption
- ◆ Dropout Voltage : 60mV @ 30mA
200mV @ 100mA
- ◆ Maximum Output Current : 150mA
(300mA=XC6204 E to H Type)
- ◆ Highly Accurate : $\pm 2\%$
- ◆ Output Voltage Range : 1.8V ~ 6.0V (XC6204)
0.9V ~ 1.75V (XC6205)
- ◆ Low ESR Capacitor Compatible

■ GENERAL DESCRIPTION

The XC6204/6205 series are highly precise, low noise, positive voltage LDO regulators manufactured using CMOS processes. The series achieves high ripple rejection and low dropout and consists of a standard voltage source, an error correction, current limiter and a phase compensation circuit plus a driver transistor.

Output voltage is selectable in 50mV steps within a range of 0.9V ~ 6.0V.

The series is also compatible with low ESR ceramic capacitors which give added output stability. This stability can be maintained even during load fluctuations due to the excellent transient response of the series.

The current limiter's foldback circuit also operates as a short protect for the output current limiter and the output pin.

The CE function enables the output to be turned off, resulting in greatly reduced power consumption.

■ APPLICATIONS

- Mobile phones
- Cordless phones
- Cameras, video recorders
- Portable games
- Portable AV equipment
- Reference voltage
- Battery powered equipment

■ FEATURES

Maximum Output Current:

: 150mA (300mA=XC6204 E to H TYP.)

Dropout Voltage : 200mV ($I_{OUT} = 100mA$)

Operating Voltage : 2V ~ 10V

Output Voltage Range

: 1.8V ~ 6.0V (XC6204) (50mV steps)

0.9V ~ 1.75V (XC6205) (50mV steps)

Highly Accurate : $\pm 2\%$

Low Power Consumption : 70 μA (TYP.)

Standby Current : Less than 0.1 μA (TYP.)

High Ripple Rejection : 70dB (10kHz) (XC6204)

60dB (10kHz) (XC6205)

Operational Temperature Range

: -40°C ~ 85°C

Low ESR Capacitor Compatible

: Ceramic capacitor

PIN CONFIGURATION

SOT-25
(TOP VIEW)

SOT-89-5
(TOP VIEW)

USP-6B
(BOTTOM VIEW)

*The dissipation pad for the USP-6B package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the VSS pin.

PIN ASSIGNMENT

| PIN NUMBER | | | PIN NAME | FUNCTION |
|------------|----------|--------|----------|----------------|
| SOT-25 | SOT-89-5 | USP-6B | | |
| 1 | 4 | 1 | VIN | Input |
| 2 | 2 | 5 | Vss | Ground |
| 3 | 3 | 6 | CE | ON/OFF Control |
| 4 | 1 | 2, 4 | NC | No Connection |
| 5 | 5 | 3 | Vout | Output |

H= High Level

L= Low Level

■ PRODUCT CLASSIFICATION

● Selection Guide

The following options for the CE pin logic and internal pull-up/down are available:

- High Active + no pull-down resistor built-in (standard)
- High Active + 300k Ω pull-down resistor built-in <between CE-Vss> (semi-custom)
- Low Active + no pull-up resistor built-in (semi-custom)
- Low Active + 300k Ω pull-up resistor built-in <between CE-Vss> (semi-custom)

Note:

With the pull-up resistor or pull-down resistor built-in types, the supply current during operation will increase by $V_{IN} / 300k\Omega$ (TYP.)

● Ordering Information

XC6204/6205①②③④⑤⑥

| DESIGNATOR | DESCRIPTION | SYMBOL | DESCRIPTION |
|------------|-------------------------------------|----------|------------------------------------------------------------------------------------------|
| ① (*1) | Type of Regulator (CE pin Logic) | A / E | : High Active, pull-down resistor built-in |
| | | B / F | : High Active, no pull-down resistor built-in |
| | | C / G | : Low Active, pull-up resistor built-in |
| | | D / H | : Low Active, no pull-up resistor built-in |
| ② ③ | Output Voltage | 09 ~ 60, | : e.g. $V_{OUT}=2.0V$ ②→=2, ③=0 |
| ④ | Output Voltage Accuracy | 2 | : 100mV increments, $\pm 2\%$ accuracy e.g. $V_{OUT}=3.8V$, $\pm 2\%$ →②=3, ③=8, ④=2 |
| | | 1 (*2) | : 100mV increments, $\pm 1\%$ accuracy e.g. $V_{OUT}=3.0V$, $\pm 1\%$ →②=3, ③=0, ④=1 |
| | | A | : 50mV increments, $\pm 2\%$ accuracy e.g. $V_{OUT}=3.85V$, $\pm 2\%$ →②=3, ③=8, ④=A |
| | | B (*2) | : 50mV increments, $\pm 1\%$ accuracy e.g. $V_{OUT}=3.05V$, $\pm 1\%$ →②=3, ③=0, ④=B |
| ⑤ | Package | M | : SOT-25 (SOT-23-5) |
| | | D | : USP-6B |
| | | P | : SOT-89-5 |
| ⑥ | Device Orientation | R | : Embossed tape, standard feed |
| | | L | : Embossed tape, reverse feed |

NOTE :

*1: E to H types are compatible to 300mA of XC6204 series.

*2: Output voltage range of the $\pm 1\%$ accuracy product is 3.0V to 6.0V.

| 0.90~0.95 | 2.5 | 260 |
| 1.00~1.05 | 2.5 | 260 |
| 1.10~1.15 | 2.6 | 270 |
| 1.20~1.25 | 2.7 | 290 |
| 1.30~1.35 | 2.8 | 300 |
| 1.40~1.45 | 2.9 | |
| 1.50~1.75 | 3.0 | |

* V_{OUT(T)}=Specified output voltage

TYPICAL APPLICATION CIRCUIT

OPERATIONAL EXPLANATION

Output voltage control with the XC6204/6205 series:

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier.

The P-channel MOSFET, which is connected to the VOUT pin, is then driven by the subsequent output signal. The output voltage at the VOUT pin is controlled & stabilized by a system of negative feedback.

The current limit circuit and short protect circuit operate in relation to the level of output current. Further, the IC's internal circuitry can be shutdown via the CE pin's signal.

< Low ESR Capacitors >

With the XC6204/05 series, a stable output voltage is achievable even if used with a low ESR capacitor as a phase compensation circuit is built-in. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (CL) is connected as close as possible to the output pin (VOUT) and the VSS pin. Please use an output capacitor with a capacitance value of at least 1 μF. Also, please connect an input capacitor (CIN) of 0.1 μF between the VIN pin and the VSS pin in order to ensure a stable power input.

● Recommended output capacitor values

| VOUT | 0.9V ~ 1.2V | 1.25V ~ 1.75V |
|------|-------------|---------------|
| CL | 4.7 μF | 2.2 μF |

■ OPERATIONAL EXPLANATION (Continued)

<Current Limiter, Short-Circuit Protection>

The XC6204/05 series includes a combination of a fixed current limiter circuit & a foldback circuit, which aid the operations of the current limiter and circuit protection. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows. However, when the input/output voltage differential is quite small, this current will be about 200mA.

<CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin with the XC6204/05 series. In shutdown mode, output at the VOUT pin will be pulled down to the VSS level via R1 & R2. The operational logic of the IC's CE pin is selectable (please refer to the selection guide). Note that as the standard XC6204/05B type is 'High Active/No Pull Down', operations will become unstable with the CE pin open. Although the CE pin is equal to an inverter input with CMOS hysteresis, with either the pull-up or pull-down options, the CE pin input current will increase when the IC is in operation.

We suggest that you use this IC with either a VIN voltage or a VSS voltage input at the CE pin. If this IC is used with the correct specifications for the CE pin, the operational logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry if a voltage between 0.25V and 1.5V is input.

<Minimum Operating Voltage>

In order to stabilize the IC's operations, an input voltage of more than 2.0V is needed. Should the input voltage be less than 2.0V, the output voltage may not be regulated correctly. (Please refer to Input Voltage vs. Output Voltage characteristics below.)

- ① When VIN is less than 2.0V, the CE pin remains in stand-by mode.
When VIN rises above 2.0V, the power supply will turn ON.
- ② The input power supply will begin to rise after a few hundred msec.
(Please also refer to the transient response characteristics.)

NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current.
Please strengthen V_{IN} and V_{SS} wiring in particular.
3. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible.

* Since the operation of this IC is only guaranteed from $V_{IN}=2.0\text{V}$ and above, it is essential that when using with applications where $V_{OUT}=2.0\text{V}$ or less, the difference between V_{IN} and V_{OUT} be at least equal to $2\text{V} - V_{OUT(T)}$.
